

Custom Single-Mode Fiber Optic Cables

Article Overview

Custom single-mode fiber optic cables can be tailored for length, connectors, jacket type, and performance specifications to meet precise application needs.

Overview

Custom single-mode fiber optic cables are designed to provide high-performance optical transmission for applications requiring minimal signal loss over long distances. These cables are ideal for telecommunications, data centers, laboratory setups, and specialized industrial or OEM applications. They allow users to specify fiber type, connector configuration, cable length, and jacket material to match exact requirements.

Key Customization Options

1. Fiber Type:

- Single-mode fibers (SM) are optimized for long-distance, high-bandwidth transmission.
- Variants include standard OS2 fibers and low-bend sensitivity fibers for tight installations . 2. Connector Types:

- Common connectors include LC, SC, ST, FC, MTRJ, MTP, and ferrule types like APC or UPC.

- Input and output connectors can be independently specified to match equipment requirements . 3. Cable Jacket and Construction:

- Options include indoor/outdoor, armored, aerial, tactical, zip cord, tight-buffered, and plenum or riser-rated jackets (OFNR/OFNP).
