

Electrical Distribution Box for Engineering Costs

Article Overview

Electrical distribution boxes typically range from \$50 for basic residential units to over \$3,500 for high-capacity commercial or industrial panels, depending on specifications and installation requirements.

Residential Distribution Boxes

For standard residential projects, single-phase distribution boxes or panel boxes generally cost between \$50 and \$700 for the unit alone, depending on amperage and material (plastic vs. metal) and whether it includes basic breakers . Installation adds labor costs, which can bring the total to \$600-\$1,100 for a 100-amp panel, and \$1,900-\$3,400 for a 200-amp upgrade . Plastic boxes are cheaper (\$1-\$3 per single-gang unit), while metal boxes range from \$4-\$8, with specialized boxes for heavy loads costing \$11-\$25 or more .

Commercial and Industrial Distribution Boxes

Commercial and industrial projects require higher-capacity, three-phase distribution boxes with enhanced durability, safety features, and sometimes smart monitoring systems. Prices for these units can exceed \$2,500, with total installed costs often surpassing \$3,500, depending on amperage, enclosure type, and labor complexity . Factors such as weatherproofing, outdoor installation, and integration with building management systems can further increase costs.
