

Fiber Optic Cable Stripping Tool Pliers

Article Overview

Fiber optic cable stripping pliers are precision tools designed to remove cable jackets, buffer coatings, and microscopic fiber coatings without damaging the delicate optical fiber core.

Purpose and Importance

Fiber optic cable stripping pliers are essential for preparing optical fibers for termination, splicing, or connector installation. Unlike standard wire strippers, these tools are specifically calibrated to remove the outer jacket, buffer tubes, and the 250µm acrylate coating with micron-level accuracy, preventing fiber breakage and ensuring low-loss connections during fusion splicing or mechanical termination .

Key Features

- **Multi-Hole Precision:** Many models feature a tri-hole design to handle three stripping stages: 2–3 mm jackets, 900µm tight buffers, and 250µm coatings .
- **Ergonomic Design:** Cushioned, non-slip handles reduce hand fatigue during high-volume FTTH deployments .
- **Factory Calibrated Blades:** Pre-set blades ensure the fiber cladding is never nicked, maintaining fiber integrity .
- **Durability:** Hardened carbon steel blades provide long-lasting edge retention .
- **Safety Locking Mechanism:** Keeps jaws closed when not in use to protect the precision cutting surfaces .
