

# Fiber optic splice patch cord colors

## Overview

The standard multimode OM1/OM2 fiber patch cords are typically colored in beige or black, while OM3 and OM4 are aqua and magenta, respectively. Understanding fiber-optic color codes is essential for any technician tasked with installing, maintaining, or troubleshooting modern fiber networks. By adopting the TIA/EIA-598C standard, you gain a universal “language” of colors that speeds identification, reduces miswiring, and enhances safety. When a tech opens a fiber optic cable to prepare it for splicing, they will find a colorful bundle of buffer tubes as on this armored cable. The colors of the buffer tubes and likewise the fibers in the tubes provide the identification the tech needs to complete the splicing of the fibers as the. Fiber optic cables for external plants and premises, such as fiber optic distribution cables and fiber optic patch cables, often use colored outer jackets or printing. You'll learn how to identify single-mode vs. multimode at a glance, trace individual strands in a 144-fiber bundle, and avoid the critical error of mixing connector types.
