

How much does it cost to run fiber optic cable from the computer room

Article Overview

Handling and installing fiber optic cable in a computer room typically costs between \$250 and \$1,000 per drop, depending on fiber type, installation complexity, and additional components.

Cost Breakdown

Materials: Fiber optic cable costs vary by type and quality. Indoor multimode cables (OM3/OM4) generally range from \$0.40 to \$6 per foot depending on strand count and jacket type, while single-mode cables may be slightly less per foot but require more expensive termination equipment. Pre-terminated patch cables and connectors add to the cost, with prices influenced by connector type and fiber count.

Labor: Labor is a significant component, especially for precise handling, routing, and termination in a computer room. Typical indoor installation rates range from \$1.00 to \$3.00 per foot, depending on access, routing complexity, and termination requirements. For per-drop installations, labor is included in the \$250-\$1,000 range per drop.

Additional Costs: Accessories such as patch panels, adapters, enclosures, and conduit may add \$100-\$250 per run. Permits and local approvals are usually minimal for indoor computer room installations but can add \$150-\$350 for larger projects. Delivery and disposal logistics may also contribute to the total cost.

Example Estimates

- Basic indoor run: 1,000 ft single-mode cable with minimal terminations: Cable \$0.40/ft, Labor \$1.00/ft, Accessories \$100, Permits \$150. Total $\approx$ \$2,650-\$3,100.
