A spectrometer is an analytical tool used across various scientific disciplines to measure how a substance interacts with light. Specifically, a UV-Visible Spectrometer measures the absorption or transmission of light in the ultraviolet (UV) and visible (Vis) regions of the electromagnetic. No part of this work may be reproduced, stored, in a retrieval system, or transmitted in any form by any means, including electronic or mechanical, photocopying and recording, without prior written permission from HORIBA Instruments Incorporated. Requests for permission should be requested in. Once all experiments have finished you can shut down the spectrometer. Shutting down the spectrometer means: Shutting down the spectrometer DOES NOT MEAN: The helium compressor should only be switched off for maintenance or if the spectrometer is not used for a longer time. Therefore never touch these windows. This document provides an overview of the Agilent 8890 Gas Chromatograph (GC) and the Agilent 8850 Gas Chromatograph along with detailed operating instructions.
