

How to shield a fiber optic network

Overview

An armored fiber optic cable is a standard fiber cable wrapped in a protective outer layer, or “armor. Lightning-induced surges can travel through power lines, telecommunication lines, or nearby metallic structures and pose a. Fiber optic cables enable high-speed, long-distance data transfer, forming the backbone of modern communication. Yet, outdoors, they face temperature swings, moisture, UV exposure, rodents, and human interference. Protecting them is essential for long-term reliability. However, the problem of rats and squirrels chomping on the insulation and causing some major inconveniences never goes away. We can now offer a shielding seal that ensures. Cable shielding is essential to protect data and power transmission from interference, especially in environments with high levels of electromagnetic interference (EMI).
