

Inwardly rolled edge cable tray with serrated edge

Overview

The Rolled Edge Cable Tray is a perforated tray offering a 12mm curved edged return sides as well as a built in splice connection. In practice, edge design has a direct impact on installation safety, cable protection, structural performance, and compliance with regional standards. Using perforated cable trays as a representative example, this article explains common edge design types, their performance in real engineering. Steel & Tube offer a full range of cable trays and cable ladders suitable for all cable containment, and additionally can provide full take-offs from plans through to a complete quotation. TALON cable cleats provide support, restraint, strain relief, and protect cable management systems during a short-circuit by containing the cables without damage. The us-trations without notice. Features: Accompanying literature coming soon.
