

Is a construction site electrical distribution box a switch box

Overview

Whereas a distribution box is designed to distribute electricity, a switchboard is used to operate and control electrical devices or processes. You can think of this as the central point where power is distributed to multiple circuits. The main distribution board. The power distribution system at the construction site shall implement hierarchical power distribution, which shall be equipped with a general distribution box (or distribution room), a distribution box below the general distribution box, a switch box below the distribution box, and electrical. A distribution board is a fixed electrical panel that divides power into circuits with protection; a distribution box is more compact or portable, used for junctions or temporary setups. What is a Distribution Board?

A distribution board —also called a panelboard, breaker panel, or electrical. This fact sheet explains how to apply the requirements shown in AS/NZS 3012:2019 Electrical installations – construction and demolition sites (AS/NZS 3012:2019), which is called up as a mandatory standard by section 163 of the Work Health and Safety Regulation 2025 (WHS Regulation).
