

Layout and Wiring of Three-Level Distribution Box

Article Overview

A three-phase distribution box distributes power from the main supply to multiple circuits using MCCB/MCB protection, busbars, neutral and earth links, ensuring balanced load and safety.

Overview of Components

A three-phase distribution box (DB) typically includes:

- Main switch (MCCB or MCB): Acts as the primary disconnect and protection against overcurrent and short circuits .
- Residual Current Devices (RCD/RCCB): Optional, for earth fault protection .
- Miniature Circuit Breakers (MCBs): Protect individual circuits or loads .
- Busbars: Conductors connecting the main switch to MCBs, handling high current safely .
- Neutral and Earth links: Distribute neutral and grounding connections to all circuits .

Wiring Layout Steps

- Incoming Power Connection: The three-phase supply (L1, L2, L3) and neutral enter the DB from the transformer or utility meter .
- Main Switch Connection: Connect L1, L2, L3 to the input terminals of the main MCCB/MCB. If using a 4-pole breaker, connect neutral to the neutral terminal; otherwise, connect neutral to the neutral busbar .
