

Methods for Customizing Galvanized Mesh Cable Trays

Overview

Learn how to manufacture custom galvanized perforated cable trays with our professional guide. Galvanized wire mesh cable trays are a system for supporting and protecting electrical cables, made from small steel bars interwoven into a mesh and surface treated by pl Life Around. Wire mesh cable trays are widely used in modern electrical wiring systems due to their open structure, excellent ventilation, and ease of installation. Compared to ladder or solid-bottom trays, they are more flexible and better suited for complex environments. This article provides an in-depth. In the case of outdoor or salty air, we apply the Hot-Dip Galvanizing. We immerse the tray that is done into a huge container of molten zinc at a temperature of approximately 450 C. These trays are used in various industries for organizing cables that carry power, control signals, or communication lines.
