

Network power distribution box power strip

Article Overview

A network power distribution box, or power strip, safely distributes AC power to multiple network devices in data centers, server rooms, or office racks.

Overview

Network power strips, also known as rack-mounted power distribution units (PDUs), are designed to provide a reliable and organized power source for servers, switches, routers, and other critical network equipment. They are essential in environments where multiple devices need stable AC power and help prevent overloading circuits while maintaining efficient power management .

Key Features

- **Multiple Outlets:** Network power strips offer numerous outlets in a single unit, often designed to accommodate large transformer plugs without blocking adjacent sockets .
- **Rack-Mountable:** Many PDUs are designed to fit standard server racks (1U or 2U), allowing compact and professional installation .
- **Surge Protection:** Some models include built-in surge protection or circuit breakers to safeguard connected equipment from voltage spikes or overloads .
- **Variety of Configurations:** Available in different cord lengths, outlet types, and amperage ratings to suit various network setups .
- **Durable Construction:** Industrial-grade metal housings and impact-resistant materials ensure longevity and reliability in demanding environments .
