

No signal from fiber optic router

Overview

Many fiber internet problems come from dirty connectors or loose plugs, not major faults. Power cycling or restarting your ONT (Optical Network Terminal) often resolves simple troubleshooting internet issues. First, check the basics—look for power issues on your optical network terminal and inspect all cables for visible damage. These cables are made of glass or plastic fibers that transmit data as light signals. Types of Fiber Connections There are two. An ONT with no service is the most common FTTH trouble call. This is the workflow that gets you from a customer at the door to a confirmed root cause: ONT LED check, optical measurement, fiber path verification, and OLT-side validation. This article explains the common causes, step-by-step troubleshooting methods, and when to contact your broadband provider to restore your internet.
