

Optical Power Splitter Design

Overview

In this article we propose a design of an optical power splitter based on the phenomenon of power coupling in the tapered splice between a single-core (SMF-28) and a seven core fiber (MCF-7), which was originally developed for spatial division multiplexing telecommunication. In this article we propose a design of an optical power splitter based on the phenomenon of power coupling in the tapered splice between a single-core (SMF-28) and a seven core fiber (MCF-7), which was originally developed for spatial division multiplexing telecommunication. In this study, we present the design and optimisation of a 2×4 quadrature phase and power splitter based on cascaded restricted interference-multimode interference (RI-MMI) couplers integrated with thermo-optic phase shifters on a silicon photonic platform.
