An optical splitter, also known as a beam splitter, fiber splitter, or fiber optic splitter, serves as a vital passive component in optical communication systems. Its primary function is to split the optical signal of one input optical fiber into multiple optical signals and transmit them to. It typically has one input port and multiple output ports, allowing you to connect multiple devices to a single source of signal. There are several countries that are considered as leaders in deploying Fiber-to-the-Home (FTTH) technology.
