

Which port is closest for the China Telecom Huawei IPTV terminal box

Overview

Select Ethernet port 2 in the Port List area, that is, the network port used to access the IPTV. After the configuration is complete, click Apply. Connect to your ISP directly by deleting all connections and adding a new one with Encapsulation Mode: PPPoE, VLAN ID: 1 and the User Name and Password provided by your ISP. LAN1 (or 2/3/4) has to be unticked to use another router on that port for PPPoE. Gponsolution (config-gpon-lineprofile-1)#gem add 11 eth tcont 4 Gponsolution. Add a user for IGMP on service port 266 and enable authentication. Enable monitoring of multicast traffic on VLAN 26. Add. BTW one of the LAN ports is checked in the "Binding Options" on my internet configuration (not shown in the screenshot) to enable internet connectivity on that particular port (which is connected to the WAN port of my router). Unchecking all didn't get me any internet.
